GUN VIOLENCE IN U.S.

Agenda

01 Objective

02 Understanding Dataset

03 Exploratory Data Analysis

04 Pattern Recognition and Underlying Assessment

05 Results and Conclusion

Objective

ANALYZE — To analyze US Gun violence data

INTERPRET — To observe patterns of Gun Violence related incidents across Time, Location and Demographics

RECOMMEND — To make recommendations to mitigate Gun Violence related incidents

Dataset

- Data was taken from the Gun Violence Online Archive (GVA) of incidents collected from over 2,000 media, law enforcement, government and commercial sources daily.
- Data gathered over a period 5 years spanning through Jan 2013 to Mar 2018
- Approximately 165 MB of data in CSV file
- More than 230,000 records across 37 columns
- Records were cleaned and consolidated into one single csv file for analysis
- Tableau and R were used for analysis

Conclusion

- The main reasons for gun violence are terrorism, alcohol under influence and drug involvement.
- Florida, California and Texas were the states with most cases.
- Illinois was the most dangerous city according to this category.
- Laws should be made strict especially in these regions.
